

Empowering the Future of SafeLiquid with CON Token:

A Call for Co-creation

In the era of continuous innovation in blockchain technology and the rapid development of FinTech, SafeLiquid is committed to building a decentralized cryptocurrency trading platform. We aim to lead new market trends with our innovative perpetual contract mechanism and secure, efficient trading experience. To recognize the contributions of individuals and organizations to the platform's development, we have carefully designed the "SafeLiquid Contributor Airdrop Token" (CON token). This token serves to incentivize all contributors who dedicate their wisdom and effort to the platform's construction, jointly fostering a vibrant and promising ecosystem.

I. CON Token Issuance and Initial Pricing

The SafeLiquid platform plans to issue a total of 100 million CON tokens, with an initial price of \$0.001 USD. This low entry price not only reduces the investment threshold for early participants but also lays a solid foundation for the steady appreciation of the token's value in the future. We believe that as the platform's functions are continuously improved and the ecosystem gradually expands, the scarcity and practical application value of the CON token will rapidly increase, bringing significant appreciation potential.

II. Buy-Back and Burn Mechanism – Robust Scarcity, Value-Driven

SafeLiquid adopts an innovative buy-back and burn mechanism. 20% to 30% of the spot trading fees generated by the platform will be used to buy back CON tokens for burning until the total supply of CON tokens is reduced to 1 million. This mechanism has multiple benefits:

1. **Enhancing Token Scarcity:** As a portion of each transaction fee is used for buy-back and burning, the circulating supply of CON tokens in the market will gradually decrease. This increasing scarcity will drive the token price upwards based on supply and demand dynamics.
2. **Value Return to Contributors:** The buy-back and burn mechanism not only tightens the token supply but also directly returns the platform's trading revenue to the community and token holders, forming a positive value cycle. This means that every transaction fee will inject momentum into the long-term appreciation of the CON token, and contributors' holding returns will increase with the platform's trading volume.
3. **Incentivizing Long-Term Holding:** By establishing the buy-back and burn mechanism, SafeLiquid encourages contributors to hold CON tokens for the long term, thereby forming a stable community base. Long-term holders will not only enjoy the dividends of token value appreciation but also receive priority benefits in various future incentive measures of the platform's development.

III. CON Token Holder Benefits

The SafeLiquid platform provides CON token holders with multiple benefits, aiming to build

a win-win ecosystem:

1. **Airdrop Rights:** CON token holders will have priority participation rights in future token airdrops by the SafeLiquid platform. Whether it's airdrops of the platform's native tokens or those of partner projects, holders will be the first to receive airdrop qualifications, ensuring they receive substantial rewards in the early stages of ecosystem development.
2. **Platform Revenue Sharing:** In future ecosystem incentive programs, CON token holders will have the opportunity to participate in incentives such as platform transaction fees and revenue sharing, realizing direct economic returns. This will motivate more contributors to participate in platform construction and jointly promote the sustainable development of SafeLiquid.
3. **Priority Participation in New Projects:** SafeLiquid will successively launch more innovative products and applications in the future. CON token holders will receive priority access to try, test, and participate in these new projects. Whether it's new trading products, DeFi protocols, or cross-chain functionalities, token holders will be the first to experience the latest technological advancements.

IV. Platform Vision and Development Opportunities

SafeLiquid is dedicated to building a trustless, decentralized, and efficient cryptocurrency trading platform. We believe that by introducing advanced perpetual contract mechanisms and strict risk management systems, the platform will achieve the following vision:

- **Building a Highly Transparent and Secure Trading Environment:** Relying on the immutable nature of blockchain, SafeLiquid will achieve full on-chain transparency of transaction data, providing an open and fair-trading environment for all users.
- **Achieving Low-Latency, High-Throughput Trading Experience:** Through an efficient matching engine and off-chain order book assistance, the platform can complete order matching in an extremely short time, reducing transaction costs and meeting the needs of high-frequency trading and institutional-grade users.
- **Stimulating Ecological Innovation and Cooperation:** SafeLiquid will open API and SDK interfaces to attract third-party developers and partners to jointly build a diversified and scalable DeFi ecosystem. In the future, the platform will not only be limited to perpetual contract trading but will also cover various application scenarios such as lending, liquidity mining, and cross-chain interoperability, forming a complete financial ecosystem chain.
- **Driving Token Value Appreciation Through Buy-Back and Burn Mechanism:** The buy-back and burn mechanism will transform a portion of the platform's transaction revenue into token buy-back power, gradually reducing the total token supply, creating scarcity, and thereby driving token value upwards based on supply and demand, bringing long-term and stable returns to contributors.

V. Call to Contributors: Co-create the Future, Let's Move Forward Hand in Hand

In the development process of the SafeLiquid platform, we deeply understand that the power of every contributor is indispensable. It is precisely for this reason that we have specially designed the CON token incentive mechanism to ensure that all individuals and organizations

that provide wisdom and financial support for the platform's development receive generous returns.

We sincerely invite you to join the development and construction of SafeLiquid, and by donating funds and resources, jointly build this decentralized platform that disrupts traditional trading models. Your support will not only accelerate the development and iteration of the platform's core functions but also inject unlimited vitality into the entire ecosystem. As the platform's trading volume continues to increase and the ecosystem gradually improves, the buy-back and burn mechanism will further dilute the circulating tokens in the market, driving the long-term appreciation of the CON token, allowing your every contribution to be transformed into rich returns in the future.

SafeLiquid's vision is to build a fair, transparent, and efficient trading platform where every participant can realize wealth appreciation in a trustless environment. We believe that through everyone's joint efforts, SafeLiquid will surely become a leading platform in the blockchain industry, pioneering a new era of decentralized finance.

In the future, we will also launch more incentive measures and ecological cooperation plans to provide all contributors with broader development space and business opportunities. Whether you are an individual developer, an institutional investor, or a technical support party, SafeLiquid will provide you with fair participation opportunities and considerable returns. Let us move forward hand in hand and create a bright future for SafeLiquid together.

Your every contribution is the driving force behind SafeLiquid's continuous breakthrough innovation and industry disruption. Let us witness together how SafeLiquid will open up a new landscape in the field of decentralized finance and jointly embrace higher value and unlimited possibilities in the future!
